# Pugsley Creek Park Natural Areas Mapping & Inventory

## 77Acres

### *Introduction*

City of New York Department of Parks & Recreation manages one of the most extensive and varied park systems of any city in the world. These 29,000 acres of city park property occupy about 15 percent of the city's total area. In addition to flagship parks such as Central Park and Prospect Park, New York City's parklands include over 11,000 undeveloped acres, known as natural areas. Until the 1980's, the Parks Department was primarily concerned with developed landscapes and recreation facilities rather than natural areas. In the absence of a comprehensive management policy, these areas succumbed to invasive species, pollution and erosion.

In 1984, parks established the Natural Resources Group (NRG) with a mandate to acquire, restore and manage natural areas in New York City. The wetlands, forests, meadows, and shorelines under NRG's jurisdiction provide valuable habitat for hundreds of species, from rare wildflowers to large birds of prey. In addition to the goals mentioned above, NRG serves as a clearinghouse for technical research to aid in the protection and restoration of the city's natural resources. This inventory of Pugsley Creek Park was conducted as part of NRG's commitment to improving the natural areas of New York City Parks.

Pugsley Creek is a 77-acre park that is largely filled, undeveloped and mostly abandoned by people. Historically Pugsley Creek was once bordered by hundreds of acres of salt marsh, but now is dominated by black locusts, box elders, cottonwoods, and *Ailanthus* with fields of mugwort and scattered stands of Japanese knotweed and *Phragmites*. Along the creek are bands of *Spartina alterniflora*. The history of the creek goes back to the time of the Siwanoy Indians who settled in the land and used the creek to reach their village at Castle Hill Neck, which today is south of modern Pugsley Creek Park. The creek itself, which connects to the adjacent Bronx River and Westchester Creek estuaries, was formally called Maeneppis Kill. During the 17<sup>th</sup> century, the cousin of Oliver Cromwell, John Cromwell settled in this land. The creek was then renamed to Crowell's Creek. By the mid 1800's, the Pugsley family used the creek for shipping supplies to and from their newly acquired land known as Cow Neck Farm. From that point on Cromwell's Creek was then renamed to the present day Pugsley Creek. By the middle of the 1800's the urbanization of the Bronx resulted from increase in population, led to a series of changes to Pugsley Creek. Development of houses, roads, and highways shortened the northern portion of the creek and the area became largely filled.

City acquired Clason's Point in 1906 and made it a public place, then transferred a portion of the property to the Department of Marine and Aviation in 1921. The Department of Marine and Aviation operated a ferry that ran from Clason Point to College Point, Queens. In 1988, Soundview Associates built ball fields and recreational facilities at Clason's Point, which is still in operation today. In 1989, property at the corner of Lacombe and Screvin Avenues was added to greater Pugsley Creek Park. In 1996, parks developed Gus's Garden on a former dumping ground near the corner of Betts and Gildersleeve Avenues. A former sewage treatment plant at the northern end of Pugsley Creek became parks property in 1999.

Hundreds of acres of salt marsh had been filled by the 1950's. By the 1970's 80% of the park had been filled and the only natural remains are along the creek edges and a few spots upland. During the mid 1970's, a combined Throughout the 20<sup>th</sup> century, parkland along Pugsley Creek was acquired in a series of phases. New York sewage overflow (CSO) pipeline was constructed along Barret Avenue that discharges just where the channel narrows, about halfway up the creek. The pipeline impacted upland areas by discharging fill

resulting in the spread of exotic invasive species and degraded water quality in the creek. Exotic vegetation that flourished in upland areas resulting from the CSO pipeline are mugwort, Queen Anne's lace, *Phragmites*, Norway maple, sycamore maple, and others. Historically, this site and adjacent areas included a yacht building company, a beach club with bungalow housing, a boat building company, and an iron works.

There are a few natural upland areas in the northeast and southwest parts of Pugsley Creek Park. The unfilled areas in the southwest along Stephens Avenue and areas between Stephens and Hussons Avenues include native forests of hickory, sweetgum, oaks (red, pin, and chestnut), and Sassafras. The understories include arrowwood viburnum, catbrier, dogwood, and *Rubus*. Along with these natives, are plenty of invasives that encroach parts of these unfilled grounds, such as sycamore and Norway maples, Japanese knotweed, white mulberries, *Ailanthus*, garlic mustard, rose, and Japanese honeysuckle vines. Unlike the southwest areas, the unfilled areas in northeastern corner of the park on Lacombe and Screvin Avenues do not have areas dominated with native vegetation. Instead these areas are infested mainly with invasive Japanese knotweed, garlic mustard, *Ailanthus*, black locust, and white mulberries. The dominant natives of this part of the park are black cherries and box elder. On the western side of the park along Compton Ave, are unfilled areas of what once stood residential houses during the 1950's, that had since been demolished. There are still some remnants of the foundation that used to be there along with plenty of trash and dumping. Presently, at those locations are Sycamore maple and box elder forests with areas of Japanese knotweed.

A baseball field is located on Puglsey and Randall Avenues just north of the main Pugsley Creek Park. The baseball field was formed over historic wetland. Southeast of the baseball field is an unfilled natural oak forest of white, red, and pin oaks including some black cherries. Invasive Japanese knotweed is encroaching among these natives too.

To facilitate planning and restoration for Pugsley Creek Park, NRG completed an inventory of the area using entitiation, a process of identifying and describing ecologically distinct plant communities. Using aerial photographs and field reconnaissance, Parks staff delineated distinct ecological entities, known as entitiation units, based on cover type, understory structure, species composition, and topography. Evidence of historical use, current use, environmental disturbance, and additional notes were also recorded for each unit. Entitiation of the Pugsley Creek resulted in a map and database that can be used to locate valuable and threatened areas. They also serve as a baseline for measuring change over time.

Pugsley Creek Entitation Unit Descriptions, Surveyed September 2006

**Unit:** 1  
**Acreage:** 4.965  
**Mgmt. Concern:** No

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Herbaceous	Cool season grass	<5'	yes	Landfill	Sports	
Deciduous	Mugwort	<5' & 5-30'	yes			
Hemicryptophytes						
Level						
Dry/Moist						

**Comments:**

This unit consists of a fenced in baseball field between Pugsley and Randall Ave. with mugwort, cottonwood, and London plane trees growing along the fence. This is the only area of the park that is currently used for sports. A more natural forest of a different unit is south of baseball field. Other spp: Lamb's quarter, chicory, white mulberry, Oriental bittersweet, Ailanthus, bindweed, ragweed, Virginia creeper, junipers, catalpa, smartweed, thorny sow thistle, Siberian elm, and Japanese knotweed.

**Unit:** 2  
**Acreage:** 0.526  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Closed Forest	Oak, pin	all	no	Landfill		Trash
Deciduous	Oak, white	all	no			Dumping
Lianas	Cherry, black	all	no			
Undulating	Ivy, poison	<5' & 5-30'	no			
Dry/Moist	Knotweed, Japanese	<5' & 5-30'	yes			

**Comments:**

Unit is an oak forest of pin, red, and white oaks. The oak forest is located south of baseball field on Pugsley and Lacombe Ave. Japanese knotweed and poison ivy dominate the understory. There are quite a few regenerating black cherries in unit. The unit contains 4 long, rusty pipes and is very rocky with some car parts dumped in the area. Japanese knotweed has been chopped by surveying crew (observed on 11/06). Other spp: box elder, black locust, chives, and garlic mustard. Management concern due to invasive Japanese knotweed.

Pugsley Creek Entitation Unit Descriptions, Surveyed September 2006

**Unit:** 3  
**Acreage:** 0.474  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Closed Forest	Cottonwood, Eastern	>30'	no	Landfill		
Deciduous	Box Elder	5'-30'	no			
Phanerophytes	Knotweed, Japanese	<5' & 5-30'	yes			
Undulating	Mulberry, white	<5' & 5-30'	yes			
Dry/Moist						

**Comments:**

A cottonwood forest with a white mulberry and box elder subcanopy. Japanese knotweed is the dominant herbaceous species. The cottonwood forest is the transition between the baseball field and the adjacent box elder forest. Other spp: black cherry, chives, mugwort, and garlic mustard. This unit is a management concern because of invasive Japanese knotweed and white mulberry.

**Unit:** 4  
**Acreage:** 2.363  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Closed Forest	Box Elder	all	no			Trash
Deciduous	Mustard, garlic	<5'	yes			
Geophytes	Virginia creeper	<5' & 5-30'	no			
Undulating	mulberry, white	<5' & 5-30'	yes			
Dry/Moist						

**Comments:**

This unit is on Pugsley and Lacombe Ave. south of the baseball field. Cottonwoods separate this unit from the baseball field. The unit is dominated by box elders with an understory predominantly of Virginia creeper, garlic mustard and juvenile white mulberries. Other spp: squash spp., silver maple, Norway maple, Oriental bittersweet, porcelainberry, Ailanthus, poison ivy, English ivy, and bedstraw. MC: invasives

Pugsley Creek Entitation Unit Descriptions, Surveyed September 2006

**Unit:** 5  
**Acreage:** 0.268  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Herbaceous	Mugwort	<5'	yes	Landfill	Foot traffic	Trash
Deciduous	Locust, black	<5'	yes			
Hemicryptophytes	Snakeroot, white	<5'	no			
Level	Dogbane	<5'	no			
Dry/Moist	Ailanthus	<5'	yes			

**Comments:**

This is a herbaceous area composed primarily of mugwort, which includes a trail to the interior and the Lacombe Ave. entrance. Cottonwoods and box elders go along school fence of IS 174. Unit ends at top of slope into box elder unit. This unit also contains regenerating species of black locust and Ailanthus. Other spp: porcelainberry, pokeweed, dock, black nightshade, lamb's quarter, horseweed, garlic mustard, bittersweet nightshade, white mulberry, and Queen Anne's lace. MC: trash and invasives

**Unit:** 6  
**Acreage:** 0.494  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Closed Forest	Box Elder	all	no	Landfill		
Deciduous	Locust, black	all	yes			
Geophytes	Mustard, garlic	<5'	yes			
Undulating	Virginia creeper	<5'	no			
Dry/Moist	Ivy, poison	<5'	no			

**Comments:**

This unit is predominantly a box elder/ black locust forest with garlic mustard as the dominant understory along with patches of poison ivy and Virginia creeper. The unit contains a lot of trash and concrete remnants, which have been dumped. On the northwest corner of the unit near a trail lies a line of black locusts. The unit is bordered by a trail on 3 sides. Phragmites (unit 11) borders unit to the southeast. A very large willow is in the unit. Other spp: white mulberry, snakeroot, Ailanthus, black cherry, hackberry, silver maple, porcelainberry, rose, Japanese knotweed, mugwort, white ash, London planetree, and elderberry. Possible management concern of invasive garlic mustard and dumping.

Pugsley Creek Entitation Unit Descriptions, Surveyed September 2006

**Unit:** 7  
**Acreage:** 0.285  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Closed Forest	Box Elder	all	no	Landfill		Trash
Deciduous	Ailanthus	all	yes	Foundation		
Geophytes	Mustard, garlic	<5'	yes			
Undulating						
Dry/Moist						

**Comments:**

This is a forest consisting of box elders and Ailanthus with garlic mustard as the dominant understory. Unit goes along park fence on Lacombe Ave. until the end of a Japanese knotweed stand on NE corner. The dominant Ailanthus differentiates this unit from adjacent unit 6 across the trail to the west. A foundation appears along fence at Lacombe Ave. Other spp: silver maple, Phragmites, porcelainberry, black locust, rose, Virginia creeper, white snakeroot, Norway maple, poison ivy, and black cherry. MC: invasives and trash.

**Unit:** 8  
**Acreage:** 0.051  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Vineland	Honeysuckle, Japanese	<5' & 5-30'	yes	Landfill	Foot traffic	
Deciduous	Cottonwood, Eastern	5'-30'	no			
Lianas						
Knoll						
Dry/Moist						

**Comments:**

This unit is a vineland of Japanese honeysuckle. The unit is on a knoll just north of the herbaceous field of unit 16. This unit has four cottonwoods, and goes along the trail on Lacombe Ave. MC: infestation of Japanese honeysuckle.

Pugsley Creek Entitation Unit Descriptions, Surveyed September 2006

**Unit:** 9  
**Acreage:** 0.104  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Herbaceous	Phragmites	<5' & 5-30'	yes	Landfill		Trash
Deciduous	Mugwort	<5' & 5-30'	yes			
Geophytes						
Level						
Dry/Moist						

**Comments:**

This unit is a stand of Phragmites mixed with mugwort. It is bordered by Lacombe Ave. and Barret Ave. Park fence borders unit from street. MC: Phragmites

**Unit:** 10  
**Acreage:** 0.246  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Closed Forest	Box Elder	<5' & 5-30'	no	Landfill	Foot traffic	Dumping
Deciduous	Black cherry	<5' & 5-30'	no			Trash
Hemicryptophytes	Ivy, poison	<5'	no			
Slope	Mugwort	<5' & 5-30'	yes			
Dry/Moist						

**Comments:**

Closed forest of box elder and black cherry on a slope bordered by fence of school, IS 174, on one side and Phragmites on the other. The unit is full of dumping and trash. A path is located above the slope along the fence and at the bottom of slope along the Phragmites. Unit levels out on one end where Japanese knotweed starts to appear. A pheasant was spotted in unit. Other spp: white mulberry, snakeroot, cottonwood, mugwort, porcelainberry, black locust, London planetree, Japanese knotweed, garlic mustard, silver maple, Siberian elm, and box elder. MC: dumping and trash.

Pugsley Creek Entitation Unit Descriptions, Surveyed September 2006

**Unit:** 11  
**Acreage:** 0.375  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Herbaceous Deciduous Geophytes Slope Dry/Moist	Phragmites	<5' & 5-30'	yes	Landfill		

**Comments:**

This unit is dominated by Phragmites. MC: Phragmites is an invasive species.

**Unit:** 12  
**Acreage:** 0.242  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Closed Forest Deciduous Phanerophytes Level Dry/Moist	Locust, black Cherry, black Mulberry, white Mustard, garlic Ivy, poison	5'-30' <5' & 5-30' <5' & 5-30' <5' <5'	yes no yes yes no	Landfill		

**Comments:**

This is a forest of black locust, black cherry, and white mulberry. Garlic mustard and poison ivy are the dominant understory. Unit is bordered by Phragmites to the east and Japanese knotweed to the south. Other species: Japanese honeysuckle, pokeweed, elderberry and Phragmites. MC: invasive garlic mustard and white mulberry.

Pugsley Creek Entitation Unit Descriptions, Surveyed September 2006

**Unit:** 13  
**Acreage:** 0.269  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Closed Forest	Box Elder	<5' & 5-30'	no	Landfill		Trash
Deciduous	Nightshade, common	<5'	yes			
Lianas	Goldenrod	<5'	no			
Undulating						
Dry/Moist						

**Comments:**

This is a closed box elder forest with patches of vines and pokeweed and is surrounded by Phragmites of unit 138. Ground is filled with bricks and concrete. The creek is seen at the Southwest corner of unit. There was a sighting of a pheasant in the unit. Other spp: poison ivy, Virginia creeper, porcelainberry, garlic mustard, morning glory, and goldenrods. MC:Invasives and trash.

**Unit:** 14  
**Acreage:** 0.016  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Herbaceous	Knotweed, Japanese	<5' & 5-30'	yes	Landfill		
Deciduous						
Geophytes						
Slope						
Dry/Moist						

**Comments:**

This unit consists of and open field of Japanese knotweed. MC: Japanese knotweed is an invasive species.

Pugsley Creek Entitation Unit Descriptions, Surveyed September 2006

**Unit:** 15  
**Acreage:** 0.044  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Herbaceous Deciduous Geophytes Slope Dry/Moist	Phragmites	<5' & 5-30'	yes	Landfill		

**Comments:**

This unit is dominated by Phragmites. MC: Phragmites is an invasive species.

**Unit:** 16  
**Acreage:** 2.736  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Herbaceous Deciduous Hemicryptophytes Level Dry/Moist	Mugwort Goldenrod Phragmites Queen Anne's lace	<5' & 5-30' <5' <5' & 5-30' <5'	yes no yes yes	Landfill	Foot traffic	Dirt bike Trash

**Comments:**

A field of mugwort and goldenrods with dense Phragmites going around perimeter of unit. There are scattered Phragmites within the mugwort field too. A dirt path showing signs of ATV usage makes a loop in the unit. This herbaceous community was possibly formed as a result of combined sewage overflow from a storm sewer pipe that runs through nearby areas. Unit contains some trails with one leading to a dead-end street. Other spp: dogbane, Ailanthus saplings, sycamore maple saplings, box elder, crowned vetch, goldenrod, milkweed, cottonwood, and royal Pauwlonia. MC: CSO from storm water pipe and invasive Phragmites.

Pugsley Creek Entitation Unit Descriptions, Surveyed September 2006

**Unit:** 17  
**Acreage:** 0.261  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>

Hemicryptophytes						
Level						
Dry/Moist						

**Comments:**

This is an Ailanthus forest with dominant mugwort in the understory. Unit is along the fence on Lacombe Ave. bordered on the south by Japanese knotweed. Other spp: Virginia creeper, box elder sapling, and black cherry sapling. MC: Ailanthus

Pugsley Creek Entitation Unit Descriptions, Surveyed September 2006

**Unit:** 63  
**Acreage:** 0.078  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Closed Forest	Locust, black	>30' & 5-30'	yes			Dumping
Deciduous	Cherry, black	all	no			Trash
Geophytes	Mulberry, white	>30' & 5-30'	yes			
Undulating	Mustard, garlic	<5'	yes			
Dry/Moist	Rose	<5'	yes			

**Comments:**

This unit is a black locust, black cherry, and white mulberry forest with black cherry saplings, garlic mustard, and rose dominating the understory. Unit is between an open Japanese knotweed field and a black locust with mugwort forest. There is a considerable amount of dock which one can argue as dominant. On one side of the unit, towards the east, are more adult black cherry trees located in a depression. Other spp: poison ivy, hackberry, chives, Japanese knotweed, and Norway maple. MC: invasives and dumping.

**Unit:** 64  
**Acreage:** 0.121  
**Mgmt. Concern:** Yes

	Cool season grass	<5'	yes			

**Comments:**

This unit is an assortment of different trees with no particular dominance. Unit is bordered by Husson Ave. past the concrete stone and between two herbaceous communities. Black cherry, black locust, and white mulberry are located at the street entrance. Cool season grasses and wild rose dominate the herbaceous layer. Poison ivy and Virginia creeper are climbing certain trees. At one end of unit is a large cottonwood. Unit contains a small ditch but most of unit is leveled. The trees in unit are mulberries, silver maple, pin oak, cottonwood.

**Unit:** 148  
**Acreage:** 0.109  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>

Chamaephytes	Arrowwood	<5' & 5-30'	no			
Level	dogwood spp.?	<5' & 5-30'				
Moist	Catbrier	<5' & 5-30'	no			

**Comments:**

A closed oak/ sweetgum forest with 3 different oak species; red, pin, and chestnut oak. Arrowwood is the dominant understory species. The unit has standing water, about which a resident complained. Another resident says that he cuts down shrubs every year. The unit is bordered by a white fence of house 229 at a dead end street on Pugsley Ave. The unit alternates in dominance between sweetgum and oaks. Species composition suggest the unit was not filled. Unit is one of lowest points of southwestern edge of park and serves as a storm water infiltration area, accepting runoff from most of Stephens Ave. Other Spp: Oriental bittersweet, Virginia creeper, rose, Japanese honeysuckle, wild grape vines, Japanese knotweed, cottonwood, and poison ivy. MC: standing water.

Slope	Mustard, garlic	<5'	yes			
Moist	Ivy, poison	<5' & 5-30'	no			
	Virginia creeper	<5' & 5-30'	no			

**Comments:**

A closed forest on a slope downhill along the backyards of private residence on Stephens Ave. Sycamore maple is the most dominant tree species. Garlic mustard, Virginia creeper, and poison ivy dominate the understory with some roses scattered around. Japanese knotweed goes along the west side of forest unit next to the mugwort field. Looks like a place for dumping from one of the houses next to the area, a possible storage of junk. There are three very large pin oaks near fence at the southwest corner. An old concrete wall is standing in unit, a possible house once stood in this area. The unit is leveled just east of mugwort field, then it slopes at the SW part of unit and levels again towards Stephens Ave.

Other spp: box elder, Rubus, pokeweed, cucumber vine, pin oak, bitternut hickory, rose, sweet cherry, black locust sapling, Japanese honeysuckle, silver maple, and mimosa. MC: possible encroachment and invasives

Chamaephytes	sycamore, maple	<5' & 5-30'	yes			
Slope	Rose	<5'	yes			
Dry/Moist	Mustard, garlic	<5'	yes			

**Comments:**

A closed forest dominated by black locust and white mulberry. Rose and garlic mustard dominate the understory. The unit slopes towards private property and then levels out. There is a possible encroachment of landowners in to park's property. Unit is full of dumping and trash , possibly coming from residents living nearby. A lot of mosquitoes inhabit the area due to standing water caused by dumping. Unit is bordered by Japanese knotweed to the west and Phragmites at the northeast corner. Other spp: Japanese knotweed, hackberry, poison ivy, and mugwort. MC: Possible encroachment, dumping, trash, and invasives.

**Unit:** 172

Deciduous	Sycamore maple	<5' & 5-30'	yes	Foundation		Trash
Phanerophytes	Cherry, black	<5' & 5-30'	no			
Undulating						
Dry/Moist						

**Comments:**

This unit is a closed box elder forest just north of Patterson Ave. Unit ends directly after a line of cottonwoods on the south side, where mugwort begins to appear. The East side of unit is bordered by a trail. Some herbaceous vegetation is present, but mostly lacking. This unit differs from bordering box elder forests due to having a dominance in sycamore maple and black cherry and is distinguished from unit 190 because of the lack in Japanese knotweed. The unit is full of trash and dumping. A telephone pole with wires runs across the unit along the fence. An old concrete wall appears about 10ft away from the fence, a possible remnant from the 1950's when houses were once built on this area. Other spp: cottonwood, London plane, snakeroot, porcelainberry, Virginia creeper, goldenrod, bittersweet nightshade, Ailanthus, white mulberry, Norway maple, silver maple, mimosa sapling, poison ivy, hackberry, pokeweed. Some trees, mostly box elders, have been chooped down by surveying crew (observed on Nov 2006). MC: invasives, dumping, and trash.

**Unit:** 198  
**Acreage:** 0.173  
**Mgmt. Concern:** Yes

Vineland Deciduous Lianas Slope Dry/Moist	honeysuckle, Japanese	<5' & >30'	yes	Landfill		

**Comments:**

This is a unit of Japanese honeysuckle on a rocky slope. Other species on the site are black cherry, Ailanthus, and mugwort. MC: Japanese honeysuckle

**Unit:** 224  
**Acreage:** 0.004  
**Mgmt. Concern:** No

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Intertidal Deciduous Hemicryptophytes Level Surface water	Spartina alterniflora	<5'	no	Landfill		

**Comments:**

This unit consists of all the areas of Spartina alterniflora. Within this unit there are some sea lavender, glasswort, and spike grass.

Pugsley Creek Entitation Unit Descriptions, Surveyed September 2006

**Unit:** 225  
**Acreage:** 0.018  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Herbaceous	Mugwort	<5' & 5-30'	yes	Landfill		
Deciduous	Phragmites	5'-30'	yes			
Hemicryptophytes						
Slope						
Dry/Moist						

**Comments:**

This unit mainly consists of mugwort and Phragmites on a slope along the perimeter of the managed area unit 218. Other spp: black cherry, Austrian pine, cottonwood, Ailanthus, rose, white mulberry, and marsh elder. MC: Phragmites

**Unit:** 226  
**Acreage:** 0.636  
**Mgmt. Concern:** No

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Scarcely Vegetated				Landfill		

Dry

**Comments:**

The rocky portions mostly along the coast of the southeast and deep south parts of the park. The rocky portions are scarcely vegetated with some rockweed and Orach.

Pugsley Creek Entitation Unit Descriptions, Surveyed September 2006

**Unit:** 227  
**Acreage:** 0.08  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Herbaceous Deciduous Geophytes Level Dry/Moist	Phragmites	<5' & 5-30'	yes	Landfill		

**Comments:**

This unit is dominated by Phragmites. MC: Phragmites is an invasive species.

**Unit:** 228  
**Acreage:** 0.016  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Closed Forest Deciduous Hemicryptophytes Slope Dry/Moist	prunus Silver maple Box Elder Bedstraw chives	5'-30' 5'-30' 5'-30' <5' <5'	 no no no	Landfill Fence	Foot traffic	Trash

**Comments:**

A small prunus forest with bedstraw and chives in the understory. The unit is located between units 218 and 230..

Pugsley Creek Entitation Unit Descriptions, Surveyed September 2006

**Unit:** 229  
**Acreage:** 0.018  
**Mgmt. Concern:** Yes

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>

Deciduous	Phragmites	5'-30'	yes			
Hemicryptophytes						
Slope						
Dry						

**Comments:**

This unit mainly consists of mugwort and Phragmites on a slope along the perimeter of the managed area unit 218. Other spp: black cherry, Austrian pine, cottonwood, Ailanthus, rose, white mulberry, and marsh elder. MC: Phragmites

**Unit:** 230  
**Acreage:** 2.938  
**Mgmt. Concern:** No

<u>Site</u>	<u>Species</u>	<u>Height</u>	<u>Exotic</u>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Herbaceous	Cool season grass	<5'	yes	Landfill	Sports	
Deciduous					Picnic	
Geophytes					Bike/ ATV	
Level						
Dry/Moist						

**Comments:**

A managed area for recreational purposes such as sitting, picnicking, and fishing. The unit mostly filled with cool season grasses and planted Autumn olives, honey locust, Austrian pines, and red maples. Other spp: mugwort and chives.

## **APPENDIX: Glossary**

Many of these definitions are adapted from Marge Garguillo's unpublished *Plants of New York City Natural Areas: An ecological manual* (2005).

**Chamaephyte:** Mature branch or shoot system remaining perennially less than or equal to 100in above ground. Buds are produced on aerial branches close to the soil. (e.g. shrubs)

**Closed forest:** An area formed by trees at least 15 feet tall with interlocking crowns and at least 80% canopy closure.

**Competition:** The ability of one plant to overwhelm another plant by shading it out or otherwise overwhelming it.

**Deciduous:** Majority of trees shed their foliage in the autumn months.

**Depression:** A hollow, or low point, as compared to the surrounding topography. May or may not contain water.

**Dominant:** The most abundant plants in a particular plant community. A **codominant** plant is about equally as abundant as the dominant species.

**Exotic:** A species that does not naturally inhabit a specific area. An exotic plant may or may not be invasive where it is introduced.

**Exotic planting:** A gardened area where non-native species (e.g. privet, periwinkle) are tended.

**Full-crown tree:** Initially open-grown and free of competition: currently very large with a dominating crown.

**Geophyte:** Plants with buds or shoots surviving below the ground (rhizomes, bulbs, stem tubers, root tubers.)

**Graminoid:** Grasses and grass-like plants.

**Hedgerow:** Evidence of trees or shrubs planted in line i.e., maple or privet along road or path.

**Hemicryptophyte:** Shoots die back to ground level.

**Herb:** Plants without woody tissues that die back to the ground in the winter. This classification is usually applied to broad-leaved plants rather than grasses, but includes grasses for the purpose of entitation.

**Herbaceous community:** An area where grasses, grasslike plants, and herbaceous plants are predominant. Woody plants may be sparingly present, but cover less than 30% of area.

**Intertidal Communities:** Substrate is exposed and flooded by tides, includes the associated splash zone.

**Invasive plant:** A plant species that grows and reproduces without constraint, crowding or shading out other plants. The term is usually applied to plants that are not native to the given region. Invasiveness in a plant that is native to the region is rare and probably caused by unusual circumstances.

**Knoll:** A small isolated hillock.

**Landfill:** Topography altered by previous filling or dumping: i.e., while building a road or altering a wetland area. Look for rubble on the soil surface or sudden changes in grade.

**Lianas:** Vascular plants needing support, rooting in the ground permanently (vines).

**Native plant:** Plants that were growing in this region before Europeans came to North America. Native plants are adapted to the climate and soils of their region. They have relationships with birds, mammals, insects, and fungi and are integrated into the ecology of the region. New York City's native plants come from seed that spread northward after the last glaciers melted thousands of years ago.

**Ornamental:** Plants used as horticultural specimens in gardens or developed parks, not intended to reproduce or be part of a natural plant community. Very often they are non-native plants.

**Phanerophyte:** Plants that grow taller than 100 in. or whose shoots do not die back periodically to that height (e.g., trees).

**Scrub:** A shrubland or thicket, mainly composed of woody plants 1.5 to 15 feet tall.

**Slope:** Ground that forms a natural or artificial incline.

**Soil compaction:** Increasing soil density and decreasing porosity due to application of mechanical forces to the soil: i.e. due to vehicle, horse, or foot traffic.

**Species:** A group of organisms that can interbreed to produce fertile young.

**Understory:** Habitat below the tree canopy of a forest. The understory is a plant community of tree saplings, shrubs, herbs, graminoids, and mosses that can live in shade or part shade.

**Undulating:** The area has a wavy surface. Its neither a slope, a level area, or a depression, but rather a combination of all three.

**Vineland:** An area formed by at least 30% vines. Vines may be supported by vegetation, artificial means or ground surface. Often occurs on the forest or shrub border.

**Woodland:** An area formed by trees at least 15 feet tall, with most of their crowns not touching each other, but at least 30% canopy closure.
