# Natural Area Mapping and Inventory of Cunningham Park 1988 Survey

Prepared by the Natural Resources Group Michael R. Bloomberg, Mayor Adrian Benepe, Commissioner

# Cunningham Park Natural Area Mapping & Inventory Surveyed September 1988 451 acres

#### Introduction

City of New York Parks & Recreation (DPR) manages one of the most extensive and varied park systems of any city in the world. These 29,000 acres of city park property occupy about 15 percent of New York City's total area. In addition to flagship parks such as Central Park and Prospect Park, the city's parklands include over 11,000 acres of natural areas.

Until the 1980's, the Parks Department was primarily concerned with developed landscapes and recreation facilities rather than natural areas. In the absence of a comprehensive management policy, these areas succumbed to invasive species, pollution and erosion.

In 1984, Parks established the Natural Resources Group (NRG) with a mandate to acquire, restore and manage natural areas in New York City. The wetlands, forests, meadows, and shorelines under NRG's jurisdiction provide valuable habitat for hundreds of species, from rare wildflowers to endangered birds of prey. In addition to the goals mentioned above, NRG serves as a clearinghouse for technical research to aid in the protection and restoration of the city's natural resources. This inventory of Cunningham Park was conducted in 1988 as part of NRG's commitment to improving the natural areas of New York City parks.

The rolling terrain of Cunningham Park was carved out by glaciers nearly 20,000 years ago. As a result, new parks were created and new roads were laid out. Between 1928 and 1944, the City of New York assembled a series of parcels of land for what was originally called Hillside Park. One of these parcels was the site of the nation's first automobile highway in 1908.

In 1934 Hillside Park was renamed for W. Arthur Cunningham (1894-1934). Born in Manhattan, Cunningham was raised in Brooklyn, where he attended St. James's Academy. He received his L.L.B. degree from Fordham Law School in 1915, but postponed his legal career to serve his country in World War I. Cunningham distinguished himself in combat as a major in the 69th (later 165th) Regiment, A.E.F. He served as counsel and later vice president to the Textile Banking Corporation until 1933, when he was elected City Comptroller on Mayor LaGuardia's fusion ticket. Cunningham died suddenly of a heart attack while horseback riding on Long Island on May 5, 1934.

Mayor Fiorello LaGuardia dedicated the plaza in Cunningham's memory near the center of the park in 1936. That year marked the completion of work by the Works Progress Administration and the Parks Department to develop the southern part of the park. The plan provided tennis courts, playgrounds, stables, bridle paths, playing fields, picnic groves, and parking lots. In the early 1950s the City of New York acquired land for a greenbelt of public parks along the route of the former railroad that ran from Flushing to Babylon. The Kissena Corridor links Flushing Meadows-Corona, Kissena, Alley Pond, and Cunningham Parks in a 2816-acre, 4.5-mile "emerald necklace" of parkland.

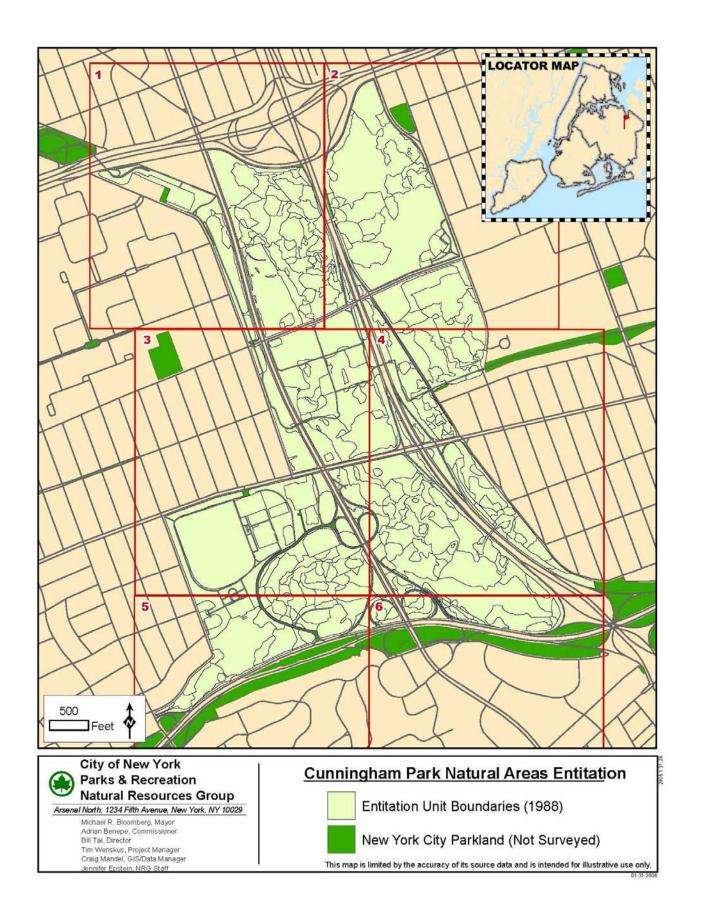

As Queens continued to grow, the park was decreased in size to accommodate the construction and expansion of schools and roads. These projects included Oceania Street (1944), Horace Harding Expressway (1951), J.H.S. 74 and its playground (1952), and the Clearview Expressway (1957-60). For more than thirty years, the Sanitation and Transportation Departments occupied a site on the eastside of the park; this area was restored as playing fields in 1986.

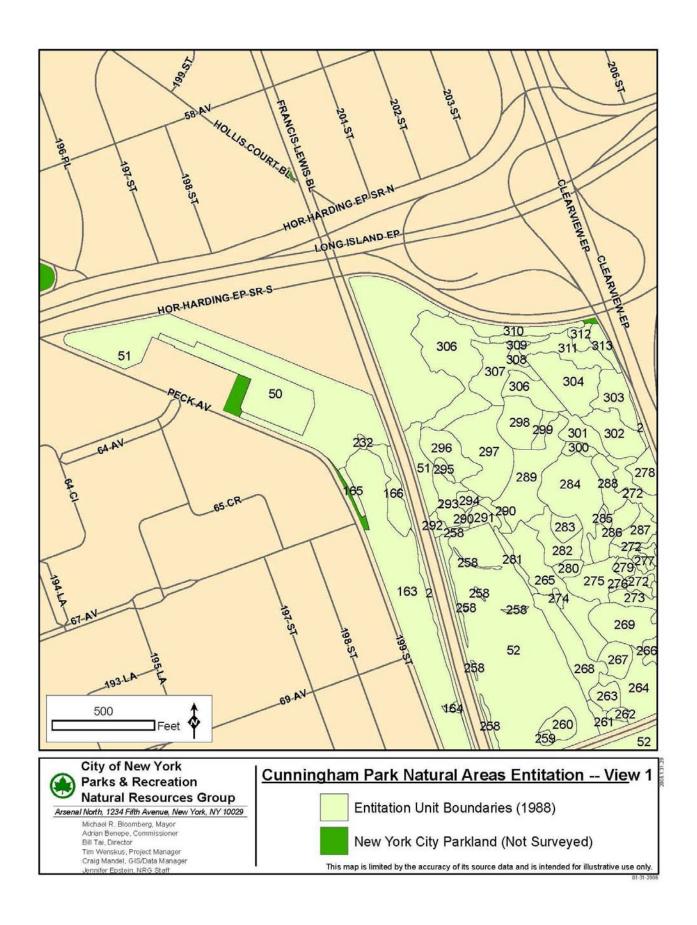

To facilitate the protection, management and restoration of Cunningham Park, NRG completed an inventory of the area using entitation, a process of identifying and describing ecologically distinct plant communities. Using aerial photographs and field reconnaissance, Parks staff delineated distinct ecological entities, known as entitation units, based on cover type, understory structure, species composition, and topography. Evidence of historical use, current use, environmental disturbance, and additional notes were also recorded for each unit. Entitation of Cunningham Park resulted in a map and database that can be used to locate valuable and threatened areas. They also serve as a baseline for measuring change over time.

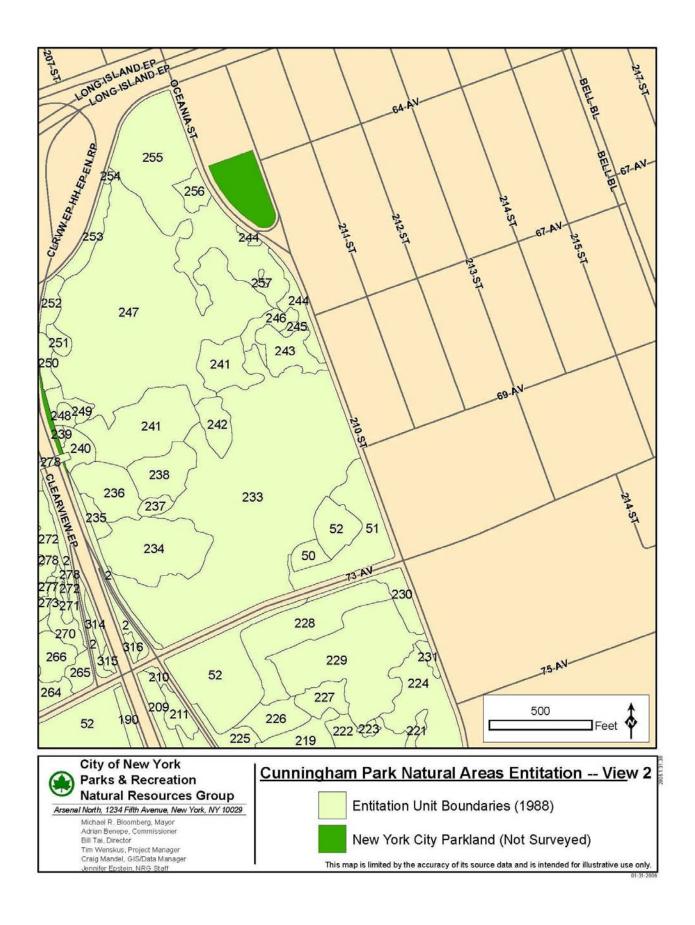

## **Entitation**

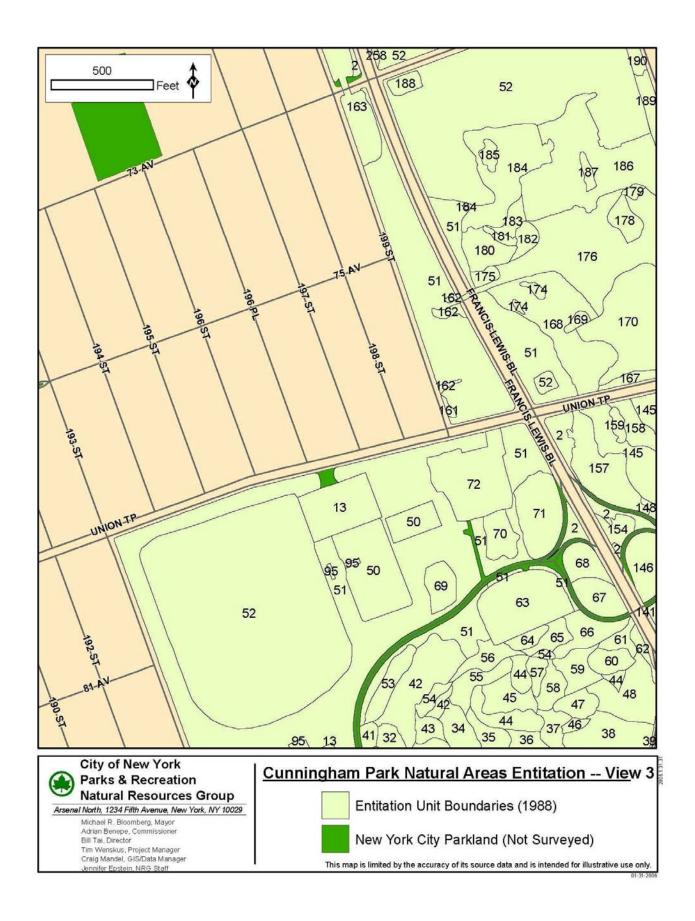

Entitation is a type of plant community inventory well suited to the patchy environments often found in urban areas. Originally designed for European landscapes, the system was revised by NRG in 1985 for use in urban parkland. NRG has used entitation widely and successfully to facilitate acquisition and restoration decisions. Put simply, entitation is a process of breaking up a park into manageable parts called "entities" or "entitation units." Entitation units are defined using a weighted list of criteria. The first level of distinction is based on cover type (e.g. closed forest, vineland, scrub), followed by canopy species composition, understory type (e.g. herbs, vines, shrubs), and understory species composition. Additional factors, such as topography and soil condition (e.g. wet, moist, dry) are also taken into account.

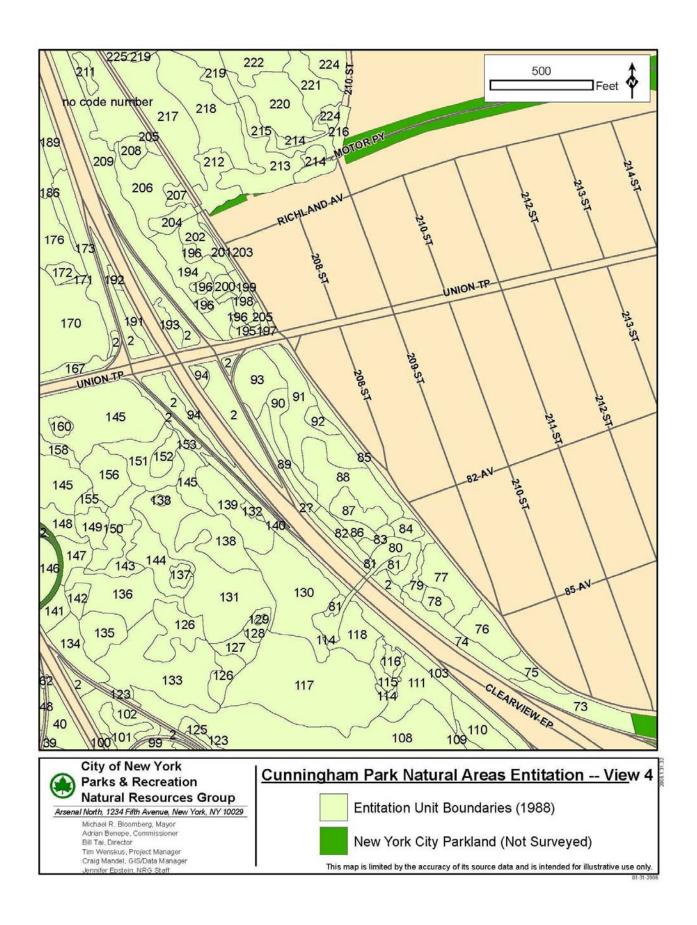

To prepare for fieldwork, mapping technicians examine aerial photographs and delineate areas of similar cover. The mapping staff use the aerial information to create a strategy for covering land area. In the field, boundaries are identified as described above. For each unit, staff record the data listed above, as well as current uses, environmental disturbances, historical indicators, community stability, and comments.

 Unit:
 1

 Acreage:
 0.29

 Mgmt. Concern:
 No

<u>Site</u>	<b>Species</b>	<b>Height</b>	<b>Exotic</b>	<u>Historical</u>	<u>Uses</u>	<b>Disturbance</b>
Woodland	Black oak	>30' & 5-30'			Foot traffic	Soil
Deciduous	Sassafras	5'-30'				Trash
Hemicryptophytes	Black birch	5'-30'				Dumping
Level	Black cherry	5'-30'				
Dry						

#### **Comments:**

This edge unit is characterized by woody species beginning to take over a herbaceous area. It stretches along the fence by Avon road near P.S. 178 and probably gets a lot of foot traffic; there is a path down the middle. Herbaceous understory of mugwort, poison ivy, Japanese honeysuckle, chives. Other species: American elm, rose, grey birch, flowering dogwood, and one large white oak.

 Unit:
 2

 Acreage:
 9.37

 Mgmt. Concern:
 No

<u>Site</u>	<u>Species</u>	<u>Height</u>	<b>Exotic</b>	<u>Historical</u>	<u>Uses</u>	<u>Disturbance</u>
Woodland	Cool season grass	<5'			Vehicle access	

Hemicryptophytes Slope Dry

## **Comments:**

Landscaped areas along major roads throughout Cunningham Park. Maintained by the Department of Transportation or in some cases, the Parks Department. Trees include crab apple, red and pin oak, and flowering dogwood. Other species: English plantain, dandelion, clover, mugwort, and chickweed.

Unit: 3
Acreage: 0.34
Mgmt. Concern: No

Site **Species** Height **Exotic Historical** <u>Uses</u> **Disturbance** Herbaceous Ornamental shrubs 5'-30' Yes Exotic Vehicle access Deciduous Chamaephytes Slope Dry

# **Comments:**

Areas of planted ornamental shrubs--privet, forsythia, spicebush, and honeysuckle species-along the Grand Central Parkway. Shrubby areas form thickets. Spicebush is the most abundant, growing upslope from wet area (unit 7). Bittersweet growing heavily near this spot; area may eventually become vineland. Other shrubs are rose and wineberry. Few trees include black oak, crab apple, and sycamore maple. Other species: Red osier dogwood, mugwort and CSG.

 Unit:
 4

 Acreage:
 0.79

 Mgmt. Concern:
 No

<u>Site</u>	<b>Species</b>	<u>Height</u>	<b>Exotic</b>	<u>Historical</u>	<u>Uses</u>	<b>Disturbance</b>
Scrub	Black oak	>30'			Foot traffic	Fire
Deciduous	Sassafras	5'-30'				Trash
Phanerophytes	Black cherry	5'-30'				
Slope	Black birch	>30'				
Dry						

#### **Comments:**

A small, disturbed forest with a great deal of woody debris. Recent fire scars where sassafras is coming in heavily; flowering dogwood <8' heavy in another section. Part of path in unit. Vines in some small trees and shrubs. A lot of leaf litter present; large tree covered with poison ivy here. Other species: 3 large white oak, hickory spp., Rubus, bittersweet, wild grape, Japanese honeysuckle, viburnum sp., chives, Ailanthus, rose, Siebold viburnum, and Norway maple.

Unit: 5
Acreage: 1.09
Mgmt. Concern: No

<u>Site</u>	<b>Species</b>	<b>Height</b>	<b>Exotic</b>	<u>Historical</u>	Uses	<b>Disturbance</b>
Closed forest	Black birch	>30'		Fence	Foot traffic	Trash
Deciduous	Black cherry	5'-30'				Dumping
Chamaephytes	Flowering dogwood	5'-30'				Compaction
Slope	Black oak	>30'				·
Dry	Mapleleaf viburnum	5'-30'				

# **Comments:**

This unit is mostly on the slope leading towards Avon Road and is bordered here by a chain link fence that is broken in some places. There is some trash and dumping along this edge. Large black birch dominate the unit, but there is a smaller area with a dense stand of young, even age black birch. An unpaved footpath borders top of slope; there is less of an understory there. Most of dogwoods here in poor shape. Other species: Sassafras, red maple, CSG, Japanese barberry, Rubus, white wood aster, arrowwood, etc.

Unit: 6
Acreage: 2.07
Mgmt. Concern: Yes

<u>Site</u>	<b>Species</b>	<b>Height</b>	<b>Exotic</b>	<b>Historical</b>	<u>Uses</u>	<b>Disturbance</b>
Closed forest	White oak	>30'			Foot traffic	Fire
Deciduous	Red oak	>30'				
Phanerophytes	Hickory spp.	>30'				
Undulating	Flowering dogwood	5'-30'				
Dry	Sassafras	5'-30'				
•	Black cherry	5-30				

## **Comments:**

Forest with 50/50 mix of red and white oak. Quite a bit of black oak near highway and a large burned area. Lots of Sassafras regeneration here. Planted crab apple and mugwort near highway. Scattered sweet gum present; lots of black cherry <5 ', and a great deal of leaf litter. MC: Lack of oak/hickory regeneration plus unhealthy dogwoods (flux evident). Also, paved paths breaking and becoming buried by soil. Other species: chives, wild geranium, honewort, aster, rose, poison ivy, Jack-in-the-pulpit, CSG, Virginia knotweed, and Japanese barberry.

Unit: 7
Acreage: 0.18
Mgmt. Concern: Yes

<u>Site</u>	<b>Species</b>	<u>Height</u>	<b>Exotic</b>	<u>Historical</u>	<u>Uses</u>	<b>Disturbance</b>
Closed forest	Red maple	>30'			Vagabond	Trash
Deciduous	Siebold viburnum	5'-30'	Yes			
Therophytes						
Depression						
Surface water						

# **Comments:**

Vernal pond with very few trees--2 red maples, 1 white oak, and 1 sweetgum. A lot of Siebold viburnum around pond edges. Water drains from a culvert from Grand Central Parkway. A lot of leaf litter here. One large snag near fence. Other species: black cherry < 5', wineberry, bitter dock, Aster, chives, and a fair amount of jewelweed; yet, overall there is not much of anything growing here. MC: Potential wetland. Weeping willow and American sycamore also present.

Unit: 8
Acreage: 0.46
Mgmt. Concern: Yes

<u>Site</u>	<b>Species</b>	<u>Height</u>	<b>Exotic</b>	<b>Historical</b>	Uses	<b>Disturbance</b>
Woodland Deciduous Phanerophytes Slope Dry	Black cherry Norway maple	>30' 5'-30'	Yes		Foot traffic Bike/ atv	Trash Compaction Dumping

#### **Comments:**

A transitional unit between street edge and forest. Black cherry and Norway maple regeneration. Scattered white oaks, sweetgum, and red maple. Lianas in some parts of unit, clinging to trees. Fence broken down at corner, several sections missing. Light dumping at corner. A great deal of trash, especially near corner. Trail is compacted. Other spp.: mugwort, CSG, black oak, Ailanthus, black birch, wild grape, hickory sp. (one), and viburnum sp. MC: Because of trash and emergent vineland patches, and compaction on the trails.

Unit: 9
Acreage: 7.79
Mgmt. Concern: Yes

Site	<b>Species</b>	<b>Height</b>	<b>Exotic</b>	<b>Historical</b>	<u>Uses</u>	<b>Disturbance</b>
Closed forest	Black oak	>30'		Exotic	Picnic	Soil
Mixed	Eastern hemlock	5'-30'			Foot traffic	Fire
Chamaephytes	Hickory spp.	>30'			Campfire/ party	Trash
Undulating	Black birch	>30'				
Dry	Black cherry	All				

## **Comments:**

Heavily used area with almost no understory, subject to many fires, lots of paths throughout (MC). Fallen branches and trees, many snags and trees with fire scars. In eastern area there is more Sassafras, and in western area, there is some black birch. Some Rhododendrons wandering in the woods near the comfort station. The edge near Grand Central Parkway has Siebold viburnum as well as bittersweet, sumac (Dead), and hawthorn sp. Other spp.: honewort, CSG, Rubus, catbrier, elderberry, mapleleaf viburnum, chives, flowering dogwood, etc.

Unit: 10 Acreage: 0.85 Mgmt. Concern: No

<u>Site</u>	<b>Species</b>	<b>Height</b>	<b>Exotic</b>	<b>Historical</b>	Uses	<b>Disturbance</b>
Closed forest Mixed Phanerophytes Slope	Black oak Black cherry Eastern hemlock	>30' All 5'-30'			Foot traffic	Trash Vandalism
Dry						

#### **Comments:**

Unit takes up where unit 11 left off. Black oak is more abundant than pin oak, and there are more hemlocks. There are still a lot of black cherry saplings, which make up most of the vegetation <15', along with mapleleaf viburnum. There's more hickory spp. and black birch present in this unit. Other spp.: Sassafras, blackhaw, sweet cherry, American holly, CSG, path rush, honewort, white wood aster, Rubus, and flowering dogwood.

 Unit:
 11

 Acreage:
 1.28

 Mgmt. Concern:
 No

Site **Species** Height **Exotic Historical** Uses **Disturbance** Closed forest Pin oak >30' Foot traffic Fire Deciduous Black cherry Trash ΑII Phanerophytes Slope Dry

# **Comments:**

Black cherry and pin oak in a 50/50 mixture. Dense understory of catbrier and cherry saplings in most areas. Along edge of road, by police stables, there are some grey birch, Sassafras, and red maple. Heading west into the forest, there's a patch of Eastern hemlock and more black oak and white oak. Other spp.: Japanese knotweed, tulip tree, elderberry, chives, poison ivy, bittersweet, Japanese honeysuckle, white ash, blueberry, Japanese barberry, flowering dogwood (<5'&5-30'), arrowwood, mapleleaf viburnum, red garden currant, American beech (one).

Unit: 12 Acreage: 0.82 Mgmt. Concern: No

Site	<b>Species</b>	<b>Height</b>	<b>Exotic</b>	<b>Historical</b>	Uses	<b>Disturbance</b>
Closed forest	Pin oak	>30'			Foot traffic	Compaction
Deciduous	Flowering dogwood	5'-30'			Picnic	Erosion
Phanerophytes	Black cherry	All				Trash
Slope	Grey birch	>30'				
Dry	Sweetgum	All				

#### **Comments:**

This forested unit differs from the surrounding units by being more open, probably due to foot traffic and the slope. It is surrounded by the parking lot and the road leading to the police precinct. There is a considerable amount of grey birch and Sassafras, and there is also a great deal of flowering dogwood. There is less black cherry here than unit 11, and unlike 11, sweetgum is present here. Other spp: white oak, red oak, red maple, highbush blueberry, shadbush, black birch, chive, path rush, CSG, poison ivy, white wood aster, catbrier, and hickory sp.

Hemicryptophytes Slope Dry

## **Comments:**

Small grassy area near police precinct and Grand Central Parkway. Nice patch of little bluestem growing in the middle. Rabbit and pheasant noted previously. Sumac is growing in south portion near fence, but most of it is stunted due to rabbit browsing. Other spp.: Rubus, path rush, dandelion, Japanese honeysuckle, chive, mugwort, and a patch of bittersweet with Japanese honeysuckle growing in from nearby trees. MC: potential meadow management. Area may be a picnic site: wood chips dumped, tire tracks at road edge, vehicle access.

Unit: 15
Acreage: 0.45
Mgmt. Concern: Yes

<u>Site</u>	<b>Species</b>	<b>Height</b>	<b>Exotic</b>	<b>Historical</b>	<u>Uses</u>	<b>Disturbance</b>

Phanerophytes	Sassafras	5'-30'				
Slope	Black cherry	5'-30'				
Dry	Catbrier	5'-30'				
	Poison ivy	5-30				

#### **Comments:**

Small round forest of pin oak surrounded by roadways and grass. A lot of Sassafras and black cherry (<5'), many young oaks (5-30'). A lot of poison ivy, particularly along fence and in one spot where it is over 5'. Catbrier growing rampantly, too. MC: great wildlife spot--plenty of cover and food, plus it is near to grassland. Other spp.: sweetgum, highbush blueberry, wineberry, flowering dogwood, black oak, hickory spp. (5-30'), arrowwood, etc.

Unit: 16 Acreage: 2.52 Mgmt. Concern: No

#### **Comments:**

Highway Police Precinct No.3. Landscaped area surrounds the building. Personal vehicles are parked on lawn adjacent to most of the roads. Many large oaks--black, red, white, and pin--as well as some Sassafras regenerating in forested pockets in the lawn. Lawns are in good condition considering they are driven across often. Police stables are present here also. Cars are also parked on wood borders.

## **Comments:**

Forest of sweetgum bisected by highway access roads with large planted red oaks. Good deal of intermediate oaks. Black cherry and flowering dogwood not as plentiful, but scattered throughout. Also some red maple and hickory spp. present. Scattered mixed regeneration besides cherry. Other trees: crab apple, American beech, hickory spp., pin oak, Sassafras, sycamore maple (<5'), black locust, Ailanthus, mulberry. Other spp.: true and false Solomon's seal, wild geranium, Japanese honeysuckle, Aster, poison ivy, rose, chives, bittersweet, etc.

Dry						

#### **Comments:**

Steep slope of thick (in girth) sumac and scattered Ailanthus leading down from the Grand Central Parkway (near overpass for Francis Lewis Blvd). Area will probably stay scrubby with rose and Rubus or become a bittersweet/wild grape vineland. Not much regeneration. Siebold viburnum and honey locust. Difficult to walk through. Other Spp: Japanese honeysuckle, black locust (one), mulberry (one), Sassafras, black cherry (two), pin oak (two), sycamore maple (<5'), etc. Sumac is not very healthy.

,	Catbrier	5-30				

## **Comments:**

Unit comprised of larger forest on the east side of the road (leading to police precinct) and two pockets of sassafras and black cherry on the northwest side. Very diverse forest of above spp., with lots of regeneration (above). Catbrier, wild grape, and bittersweet entangling some of the trees. Snags present. Dumping on road edge: leaves, and logs. Not much black cherry or hickory <30'. Only about four large sweetgum. Other spp.: American hornbeam, viburnum spp., grey birch, red oak, a good amount of flowering dogwood <5', etc.

Unit: 23 Acreage: 1.16 Mgmt. Concern: No

<u>Site</u>	<b>Species</b>	<b>Height</b>	<b>Exotic</b>	<b>Historical</b>	<u>Uses</u>	<b>Disturbance</b>

## **Comments:**

Open old picnic area with a network of footpaths running through it. Trees are mostly pin oak, with black cherry moving in from surrounding area, and there is some black cherry regeneration. Other trees include flowering dogwood, hickory spp., black oak, some mulberry in more open areas, a few white oaks, one grey birch, and Sassafras. Where there is understory it is mostly path rush, white wood aster, and CSG. There are patches of wineberry, arrowwood, mapleleaf viburnum, and bittersweet. Other species: cinquefoil, elderberry, Indian pipe, etc.

Unit: 35 Acreage: 0.76 Mgmt. Concern: No

#### **Comments:**

Closed forest almost entirely sweetgum. Some large black, red, and white oak. Most of forest floor barely vegetated with herbaceous plants. About half a dozen eastern hemlock, some black birch, red maple, flowering dogwood, hickory spp., and black tupelo. One asphalt path running through and another one down one side of unit. Several concrete and stone blocks present here. Chain link fence bordering part of unit is broken allowing access from Clearview Expwy. Other spp: true and false Solomon's seal, white wood aster, mapleleaf viburnum, etc.

A slight depression that may hold water at times. Mostly red maple, but also a number of pin oaks, and several red and black oak at edges of depression. A few hickory, one tulip (<10'). Understory sparse, but some shrubs: elderberry, blackhaw, and dogwood spp. Two burned autos in unit. Other spp.: wild grape, sensitive fern, Virginia creeper, Rubus, true Solomon's seal, poison ivy, some hemicryptophytes at edges of unit.

#### **Comments:**

Mugwort field being engulfed by rose; area will eventually be a scrubland. Unit located at eastern edge of park between Vanderbilt Motor Pkwy & 210th St. Quite a bit of bedstraw & some great ragweed present. Also, Virginia creeper abundant in one growing on trees. A clump of bittersweet present, also, Phragmites, common plantain, CSG, dandelion, plus scattered trees: weeping willow, Norway maple, very large Eastern cottonwood.

Unit: 217 Acreage: 2.30 Mgmt. Concern: Yes

Site **Species** Height **Exotic Historical** <u>Uses</u> **Disturbance** Herbaceous Red maple >30' & 5-30' Foot traffic Dumping Deciduous Vehicle access Phanerophytes Level Dry

#### **Comments:**

Red maple closed forest which borders Hollis Hills Terrace, northeast of Vanderbilt Motor Pkwy. Area appears to be relatively dry, little or no red maple regeneration; most of it 5'-30' and >30'. Many are tall and thin. Black cherry is regenerating in spots, bigger trees at unit edges. Large pin oaks, sweetgum, and some red oak present. Lots of garlic mustard, Virginia creeper. MC: Dumping along road. Other spp: Japanese honeysuckle, poison ivy, mulberry, Aster, true and false Solomon's seal, Sassafras <5', American basswood, white ash, hickory sp., etc.

Unit: 218

#### **Comments:**

Woodland between units 249 and 252 along northbound side of Clearview Expwy. Black oak and hickory sp mixed in canopy. Understory is red oak, red maple, hickory sp, Sassafras, sweetgum, black birch, wild grape and flowering dogwood. One American beech with some regeneration. Groundcover includes Aster, goldenrod, mapleleaf viburnum, dogbane, Virginia creeper and Rubus. MC: Autos and other dumping.

Unit: 251 Acreage: 0.27 Mgmt. Concern: Yes

<u>Site</u>	<b>Species</b>	<u>Height</u>	<b>Exotic</b>	<u>Historical</u>	Uses	<b>Disturbance</b>
Woodland	Sweetgum	>30' & 5-30'			Vehicle access	Fire
Deciduous	Red maple	5'-30'			Dirt bike	Vandalism
Phanerophytes					Foot traffic	
Depression						
Moist						

## **Comments:**

Small wet site where above species practically codominate. Due to frequent severe fires (from torched autos primarily) and dirt biking, there is virtually no groundcover and very little tree regeneration. Some black tupelo and pin oak present. Other spp: false nettle, Aster, buttonbush, Virginia creeper, etc. MC: severe tree damage & disturbance. Part of unit is open.

A slope off the Clearview Expressway. There is planted Austrian pine and a dense understory of fragrant sumac. Other spp: Ailanthus, hawthorn spp., black cherry, rose, wild grape, Virginia creeper, bittersweet, Norway maple (two, <3'), St John's wort, yarrow, goldenrod, CSG, chives, and deptford pink.

# **APPENDIX: Glossary**

Many of these definitions are adapted from Marge Garguillo's unpublished *Plants of New York City Natural Areas: An ecological manual* (2005).

**Chamaephyte:** Mature branch or shoot system remaining perenially less than or equal to 100in above ground. Buds are produced on aerial branches close to the soil. (e.g. shrubs)

**Closed forest:** An area formed by trees at least 15 feet tall with interlocking crowns and at least 80% canopy closure.

**Competition:** The ability of one plant to overwhelm another plant by shading it out or otherwise overwhelming it.

**Deciduous:** Majority of trees shed their foliage in the autumn months.

**Depression:** A hollow, or low point, as compared to the surrounding topography. May or may not contain water.

**Dominant:** The most abundant plants in a particular plant community. A **codominant** plant is about equally as abundant as the dominant species.

**Exotic:** A species that does not naturally inhabit a specific area. An exotic plant may or may not be invasive where it is introduced.

**Exotic planting:** A gardened area where non-native species (e.g. privet, periwinkle) are tended.

**Full-crown tree:** Initially open-grown and free of competition: currently very large with a dominating crown.

**Geophyte:** Plants with buds or shoots surviving below the ground (rhizomes, bulbs, stem tubers, root tubers.)

**Graminoid:** Grasses and grass-like plants.

**Hedgerow:** Evidence of trees or shrubs planted in line i.e., maple or privet along road or path.

**Hemicryptophyte:** Shoots die back to ground level.

**Herb:** Plants without woody tissues that die back to the ground in the winter. This classification is usually applied to broad-leaved plants rather than grasses, but includes grasses for the purpose of entitation.

**Herbaceous community:** An area where grasses, grasslike plants, and herbaceous plants are predominant. Woody plants may be sparingly present, but cover less than 30% of area.

**Intertidal Communities:** Substrate is exposed and flooded by tides, includes the associated splash zone.

**Invasive plant:** A plant species that grows and reproduces without constraint, crowding or shading out other plants. The term is usually applied to plants that are not native to the given region. Invasiveness in a plant that is native to the region is rare and probably caused by unusual circumstances.

**Knoll:** A small isolated hillock.

**Landfill:** Topography altered by previous filling or dumping: i.e., while building a road or altering a wetland area. Look for rubble on the soil surface or sudden changes in grade.

**Lianas:** Vascular plants needing support, rooting in the ground permanently (vines).

**Native plant:** Plants that were growing in this region before Europeans came to North America. Native plants are adapted to the climate and soils of their region. They have relationships with birds, mammals, insects, and fungi and are integrated into the ecology of the region. New York City's native plants come from seed that spread northward after the last glaciers melted thousands of years ago.

**Ornamental:** Plants used as horticultural specimens in gardens or developed parks, not intended to reproduce or be part of a natural plant community. Very often they are non-native plants.

**Phanerophyte:** Plants that grow taller than 100 in. or whose shoots do not die back periodically to that height (e.g., trees).

**Scrub:** A shrubland or thicket, mainly composed of woody plants 1.5 to 15 feet tall.

**Slope:** Ground that forms a natural or artificial incline.

**Soil compaction:** Increasing soil density and decreasing porosity due to application of mechanical forces to the soil: i.e. due to vehicle, horse, or foot traffic.

**Species:** A group of organisms that can interbreed to produce fertile young.

**Understory:** Habitat below the tree canopy of a forest. The understory is a plant community of tree saplings, shrubs, herbs, graminoids, and mosses that can live in shade or part shade.

**Undulating:** The area has a wavy surface. Its neither a slope, a level area, or a depression, but rather a combination of all three.

**Vineland:** An area formed by at least 30% vines. Vines may be supported by vegetation, artificial means or ground surface. Often occurs on the forest or shrub border.

**Woodland:** An area formed by trees at least 15 feet tall, with most of their crowns not touching each other, but at least 30% canopy closure.
